

Yassin Ahmed Ali

DevOps Engineer

✉ yassinabuelsheikh@gmail.com ☎ 01143370421 📍 Cairo 🔗 LinkedIn 🐙 GitHub 📁 Portfolio

Summary

DevOps Engineer with a foundation in Linux, Docker, Kubernetes, OpenShift, Terraform, and CI/CD. Familiar with AWS, Ansible, Jenkins, GitHub Actions, GitLab, ArgoCD, and monitoring tools (Prometheus, Grafana, EFK/ELK Stack) through hands-on training and projects. Also have a background in IT operations and networking, with exposure to SD-WAN and network troubleshooting. Interested in building reliable, automated, and scalable infrastructure.

Experience

BO-NOC Engineer, Huawei 06/2025 – 10/2025 | Smart Village, Giza

- Network Monitoring & Operations: Managed network surveillance and real-time alarms using Huawei iMaster NCE, generating daily performance reports to ensure stable network health.
- Router Configuration & Troubleshooting: Configured and troubleshot Huawei hub routers (underlay/overlay), including 2WIC cards, multi-ISP links, and VRF-based network segmentation.
- SD-WAN Deployment & Automation: Onboarded and configured SD-WAN sites using NETCONF and ZTP, handling ESN/IP setup and automated provisioning.
- Routing & Traffic Engineering: Designed VLANs and WAN templates, built SD-WAN overlay tunnels, and implemented BGP routing with traffic policies to optimize WAN performance.

IT Specialist, Qsource Outsourcing 12/2024 – 06/2025 | New Cairo

- I support companies such as AstraZeneca and Danone. Installed, configured, updated software applications, operating systems, and worked in the ticketing system.
- Provide technical support to end-users, resolving issues related to systems, applications, connectivity, and joining users to domain.
- Install and update company software (Domain) and hardware as needed.
- Collecting, analyzing daily incidents, and generating ticketing reports (daily, weekly, and monthly).

Education

DevOps Track Scholarship 6 Months, NTI 09/2025 – 03/2026 | Nasr city, Cairo

Completed an intensive 6-month scholarship program combining technical and soft skills development. The training included:

- Built and administered Linux (RHEL) systems with Bash automation and security.
- Deployed containerized applications using Docker, Kubernetes, and OpenShift.
- Provisioned AWS infrastructure (EC2, VPC, IAM, ALB) using Terraform and Ansible.
- Designed CI/CD pipelines using Jenkins, GitHub Actions, and ArgoCD.
- Implemented monitoring using Prometheus, Grafana, ELK and EFK.

Bachelor of Communications and Electronics, New Cairo Academy 2018 – 2023 | 5th Settlement, New Cairo

- Cumulative Grade: Good
- Graduation Project: AI-powered IoT-based ECG Monitoring System (Grade: A+)

Internship

- SD-WAN Trainee, Huawei
- HCIA-Cloud Computing, NTI
- Network security and Mitigation, NTI
- CCNAv7, NTI

Certificates

- AWS Certified Cloud Practitioner 
- Kubernetes and Cloud Native Associate 

Projects

DevSecOps platform for a full-stack application [🔗](#)

- Built an end-to-end DevSecOps platform for a containerized Todo application on AWS EKS, provisioned with Terraform and deployed via GitHub Actions and Argo CD (App-of-Apps pattern) using Helm and Kustomize for environment overlays.
- Implemented observability with CloudWatch Container Insights and EKS Control Plane logging to monitor cluster and application health.

End-to-End-microservices-django-react [🔗](#)

- Built a full-stack microservices application (Python/Django backend, React frontend) demonstrating GitOps workflows, CI/CD automation, containerization, and cloud-native deployment practices.

Jenkins-Full-Project [🔗](#)

- Designed a CI/CD pipeline in Jenkins (Groovy) integrated with GitHub for build, test, and static code analysis (SonarQube), with DevSecOps scanning via Trivy and OWASP Dependency-Check.
- Built Docker images, managed artifacts with Nexus, and automated Kubernetes deployment using ArgoCD.

Agile Implementation & Documentation [🔗](#)

- Used Jira and Confluence to manage Agile workflows, sprint tasks, and technical documentation for cloud and DevOps projects.

Automated MERN Stack Deployment using Ansible & Multipass [🔗](#)

- Provisioned a multi-VM environment (web server with Node.js/React, database server with MongoDB) using Multipass, and developed Ansible roles to automate installation, reverse-proxy configuration, and MongoDB optimization.

Weather App (Docker & Kubernetes) [🔗](#)

- Deployed a weather app with Docker and Kubernetes, ensuring scalability and efficient traffic routing while integrating OpenWeatherMap API for real-time data.

Technical Skills

Cloud & Infrastructure

- AWS (EC2, VPC, IAM, ALB, EKS), Terraform, Ansible

Networking

- DNS, Static Routing, VLANs, Reverse Proxy
- BGP, VPN, SD-WAN, NETCONF, ZTP

Scripting

- Bash
- Python

Monitoring & Logging

- Prometheus, Grafana
- EFK/ELK Stack

Containers & Orchestration

- Docker, Kubernetes, OpenShift, Helm, Kustomize

Operating System

- Linux (RHEL)
- MCSA (Windows Server)

CI/CD & Automation

- Jenkins, GitHub Actions, GitLab, ArgoCD

Version Control & Security

- Git, GitHub, Nexus
- SonarQube, OWASP Dependency-Check, Trivy

Soft Skills

- | | |
|------------------------|----------------------|
| • Communication skills | • Flexibility |
| • Continuous Learning | • Creativity |
| • Adaptability | • Team Collaboration |
